**RE: White River Hydro Power Project  
Lock and Dams No. 1, 2, and 3**

Dear Sirs

Moblely Contractors, Inc has been in construction of the White River Hydroelectric project since June 2004. We have constructed three hydroelectric power plants within two existing lock structures and one alongside the White River near Batesville, AR. The project consisted of the renovation of two of the navigational locks and the excavation of a new site. The entrances, channels and outflows of the locks and the new site had to be excavated in rock to plan grade to allow for construction of the power plants and water flow in and out of the units.

Dykon Blasting Corp. was our blasting subcontractor for this project. As the project progressed we were very pleased with Dykon's performance and would mention these things. At our projects Dykon consistently proved they were a safety oriented company. They followed our safety procedures to the letter and did everything necessary to protect the surrounding public and property from any damage from the blasting activities. They proved also, they would do all they could to insure that Mobley Contractors, Inc, as general contractor met the schedule established for their work. Their people are knowledgeable and will take the time to explain in laymans terms what they are going to do, how they are going to do it, and what you can expect to happen.

We were pleased with Dykon's performance, safety program, and attitude toward our goals as the general contractor.

Sincerely
